**Fiber-To-The-Home Internet**

## About Zona Wyverd

Founded in 1995, Zona Wyverd is a progressive company offering state-of-the-art high-speed Internet, telephone, and digital television services to residents and businesses within an 1100 square mile area of northern Phoenix. Our service area includes 700 square miles surrounding Lake Pleasant and Castle Hot Springs as well as a 400 square mile area northwest of the White Tank Mountains along the Sun Valley Parkway corridor.

From prominent developments in northern Peoria and Buckeye such as Vistancia, Sun City Festival and Festival Foothills to the remote enclave of Horsethief Basin in the heart of Prescott National Forest, Zona Wyverd endeavors to provide exceptional communication services.

## About Wyverd Group

Wyverd Group, via its local operating entities, delivers fast, affordable, and locally-managed fiber-based internet and other fiber services. Wyverd currently operates in five states and is expanding both organically and inorganically (via M&A). We believe that each community is unique and should have an equally unique and supportive internet access network, led by a local general manager and local team enjoying support and guidance from a deeply experienced central team.

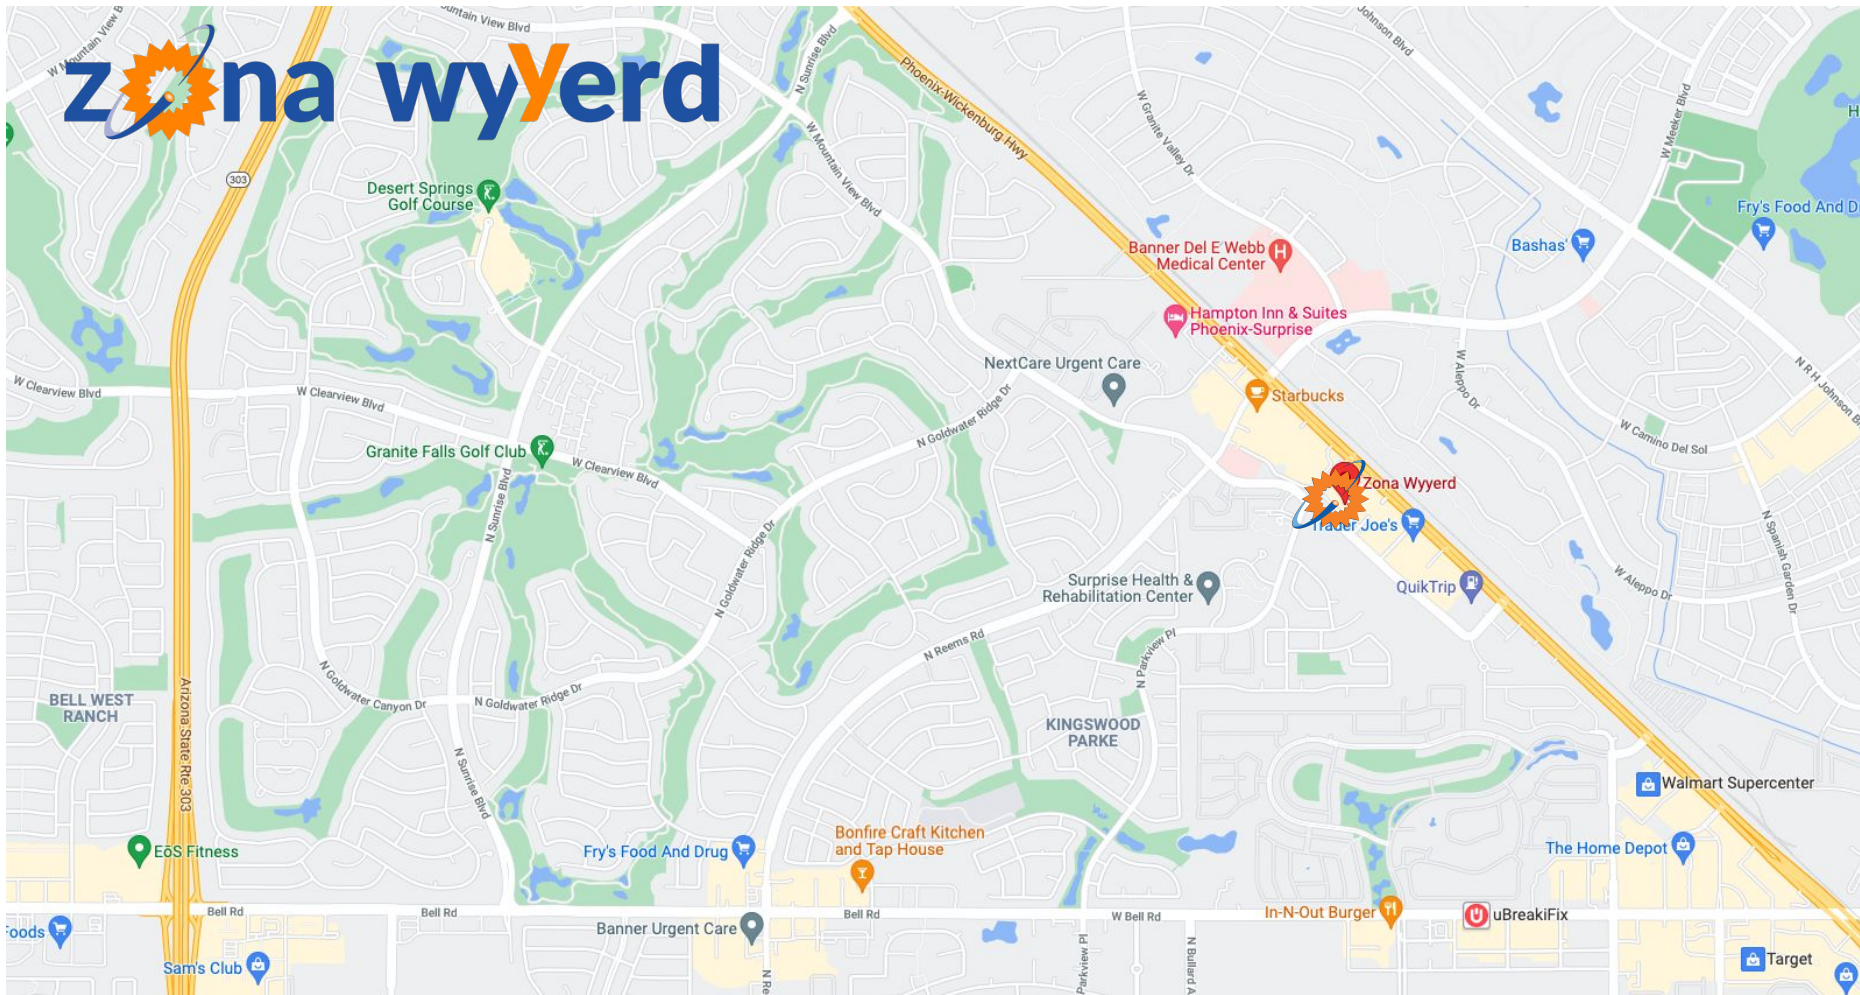

High-speed internet is a core utility that enables communities to thrive, businesses to excel and people to live where they want. This is what Wyverd delivers. Our vision is to become the cornerstone partner for internet connectivity, fiber and facilities interconnection, smart community enablement and sustainable development, one community at a time across the US and Southern Canada.

50 up and down

**\$55/mo**

## Download vs. Upload Speed?

**Download speed** refers to the **speed** at which your **internet** connection is able to retrieve data from the **internet**. **Upload speed** refers to the **speed** that your **internet** connection can allow data to be sent from your devices to the **internet**.

**Download speed** refers to how many megabits of data per second it takes to download data from a server in the form of images, videos, text, files and audio. Activities such as listening to music on Spotify, downloading large files or streaming videos on Netflix all require you to download data.

**Upload speed** refers to how many megabits of data per second you can send information from your computer to another device or server on the internet. While downloading information is more common, some online activities need data to travel in the opposite direction. Sending emails, playing live tournament-style video games and video calling a friend require fast upload speeds for you to send data to someone else's server.

The following common activities rely more on **DOWNLOAD** speeds:

- Watching a Netflix movie or show
- Shopping online
- Scrolling through social media
- Viewing YouTube videos
- Reading online articles
- Streaming music services

The following common activities rely more on **UPLOAD** speeds:

- Video calls or conferences
- Live tournament-style gaming
- Sending emails with large attachments
- Backing up data to online or cloud storage services
- Uploading videos to social media
- Working on live, cloud-hosted documents like Google Sheets or Docs

---

## What is Bandwidth?

---

**Bandwidth** is kind of like a highway — the more lanes you have, the more room you give to traveling cars, which lets cars go faster and allows a higher volume of cars through to their destination. Mbps is a good indicator of how much bandwidth your home Wi-Fi connection has. The more internet bandwidth you have, the higher your volume of data that can be downloaded at a reasonable pace. And you can increase the speed at which the data travels because more of it can flow.

# Managed WiFi

**Only \$10 / month or **FREE** with 1 gig service!**

- Zona's professional grade WiFi 6 router
- Professional installation, troubleshooting, and equipment upgrades
